Mr. Gerard J. Thibeault
Executive Officer
California Regional Water Quality Control Board
Santa Ana Region
3737 Main Street, Suite 500
Riverside, California 92501-3339

Dear Mr. Thibeault:

**Subject: May 1999 Data Report
Water Supply Contingency Plan
Production Well Sampling Program
Crafton-Redlands Plume Project**

In compliance with the approved Water Supply Contingency Plan, enclosed please find one copy of the **May 1999, Production Well Sampling Program** report prepared by HSI-Geotrans for the Lockheed Martin Corporation. This report presents analytical results from samples collected at Bunker Hill Basin Production Wells in May of 1999. Laboratory Quality Assurance/Quality Control documentation is in Attachment B which is also enclosed for your review.

Should you have any questions, comments, or request, please contact Tom Blackman at (818) 847-0791 or John Hemmans at (818) 847-0191.

Sincerely,

Carol A. Yuge

Attention: Mr. John Hemmans
Project Coordinator

Subject: May 1999 Data Report
Water Supply Contingency Plan
Production Well Sampling Program
Crafton-Redlands Plume Project

Dear Mr. Hemmans:

This report presents a summary of field procedures, protocols, and results of the Water Supply Contingency Plan production well sampling for the month of May 1999. The Water Supply Contingency Plan (WSCP) was prepared by Lockheed Martin Corporation and submitted to the State of California Regional Water Quality Control Board (RWQCB) Santa Ana Region on September 30, 1996. The plan was conditionally approved by the RWQCB in a letter dated March 6, 1997. The WSCP for the Crafton-Redlands Plume was prepared to address maintenance of water supply to purveyors in the event that wells became impacted with trichloroethene (TCE) from the Crafton-Redlands TCE Plume. A summary of key dates and WSCP sampling program evolution is provided on Table 1.

The locations of the WSCP wells and analytical results for the May 1999 sampling event for TCE and perchlorate are shown on Figures 1 and 2, respectively. Table 2 presents a summary of analytical tests performed on each WSCP well and water system sampling point. The sampling frequency of each well is once a month for the first year. More frequent sampling, if required, is based on the analytical results as outlined in the WSCP TCE and perchlorate decision matrices, provided as Figures 3 and 4, respectively. The perchlorate decision matrix was presented in the *Perchlorate Work Plan and Schedule*, which was submitted, to the RWQCB on August 15, 1997. The RWQCB approved the Perchlorate Work Plan on October

31, 1997. Table 3 presents a summary of the wells sampled twice monthly according to the decision matrices.

RESULTS

A summary of the analytical results for the May 1999 WSCP sampling event for TCE and perchlorate is shown on Figures 1 and 2, respectively, and presented on Table 4. Available groundwater elevation data is provided on Table 5. The water sampling field forms are provided in Attachment A. The chain-of-custody, laboratory data sheets, and Level 1 Modified laboratory quality assurance/quality control (QA/QC) documentation is provided in Attachment B. Beginning in May 1999, the level of laboratory QA/QC documentation was changed from Level III to Level I Modified. Attachment A and B are available upon request.

Trichloroethene

In May 1999, TCE was detected at or above the detection limit of 0.5 µg/L in seven wells and two water system sampling points including; Richardson #1 (0.79 µg/L), Gage 26-1 (10 µg/L), Gage 27-1 (11 µg/L), Gage 27-2 (1.6 µg/L), Gage 29-1 (0.64 µg/L), Gage 29-2 (4.3 µg/L), Gage 92-1 (0.82 µg/L), Gage Delivery (1.3 µg/L) and 7th & Chicago (0.5 µg/L), as shown on Figure 1 and Table 4. Groundwater samples collected from the remaining WSCP wells and system sampling points did not detect TCE.

Three groundwater samples collected in May met or exceeded 2/5th the MCL for TCE (2.0 µg/L) including; Gage 26-1 (10 µg/L), Gage 27-1 (11 µg/L), and Gage 29-2 (4.3 µg/L). The TCE impacts at Gage 26-1 and Gage 27-1 are attributed to the Norton AFB plume, thus, more frequent TCE sampling will not be implemented. The TCE impacts at Gage 29-2 are wholly or partially attributed to the Norton AFB plume, thus, more frequent sampling will not be implemented.

Perchlorate

In May 1999, perchlorate was detected at or above the detection limit of 4 µg/L in two COLL wells (Mountain View #2 and Richardson #1), nine City of Riverside Gage wells (Gage 26-1, Gage 27-1, Gage 27-2, Gage 29-1, Gage 29-2, Gage 46-1, Gage 51-1, Gage 66-1, and Gage 92-1), two Loma Linda University wells (Anderson #2 and Anderson #3), two City of Riverside system sampling points (Gage Delivery and 7th & Chicago), one City of Riverside irrigation sampling point (Gage Arlington), and two City of Loma Linda system sampling points (Mountain View Blend-Lawton and Richardson Blend), as presented on Figure 2 and Table 4.

In the May WSCP sampling, perchlorate was detected at or above 75 percent (13.5 µg/L) of the PAL in one City of Riverside well (Gage 29-2). Gage 29-2 is currently being sampled on a twice a month basis.

CLOSING

HSI GeoTrans greatly appreciates being of continued service to Lockheed Martin Corporation on this project. Should you have any questions or comments, please do not hesitate to call.

Sincerely,
HSI GEOTRANS

TABLES

TABLE 1

KEY PROJECT DATES AND WSCP SAMPLING PROGRAM EVOLUTION

September 30, 1996, Lockheed Martin submitted the Water Supply Contingency Plan (WSCP) to the RWQCB – Santa Ana Region.
March 6, 1997, the RWQCB conditionally approved the WSCP, which included sampling eight production wells (City of Loma Linda Richardson #1, Richardson #2, Mountain View #1, Mountain View #2, Victoria Farms Mutual Water Company Wells #1 and #3, and Southern California Edison #1 and #2).
June 1997, Victoria Farms Mutual Water Company was connected to City of San Bernardino Water. Pumping ceased at VFMWC #1 and #3, and the two wells were removed from the program.
June 1997, sampling of SCE #1 was discontinued due to sampling logistics. The WSCP consists of five wells, including COLL Mountain View #1 and #2, COLL Richardson #1 and #2, and SCE #2 (AUX).
August 1997, the WSCP was expanded due to the detection of perchlorate in municipal supply wells in the Bunker Hill Basin. Twenty-six wells were added to the WSCP including nineteen City of Riverside wells, five City of Redlands wells, and two Loma Linda University wells, for a total of 31 wells.
October 1997, three City of Riverside water system sampling points were added to the WSCP, including the Gage system pipeline (Gage Delivery), the Waterman system pipeline (Iowa Booster), and the sampling station measuring outflow from the Linden and Evans Reservoirs (7 th & Chicago).
March 1998, two City of Loma Linda water system sampling points were added to the WSCP, including the Mountain View system pipeline (Mountain View Blend at Lawton) and the Richardson system pipeline (Richardson Blend).
June 1998, one City of Riverside irrigation water system sampling point (Gage Arlington) and one additional City of Loma Linda water system sampling point (Mountain View Blend at Timoteo) were added to the WSCP.
December 1998, COLL Richardson #3 Well Added to WSCP Sampling Program.

Notes:

All measurements reported in feet below measuring point (ft-bmp)

Water level measurements for all City of Loma Linda, City of Riverside, and City of Redlands wells were obtained by purveyor personnel.

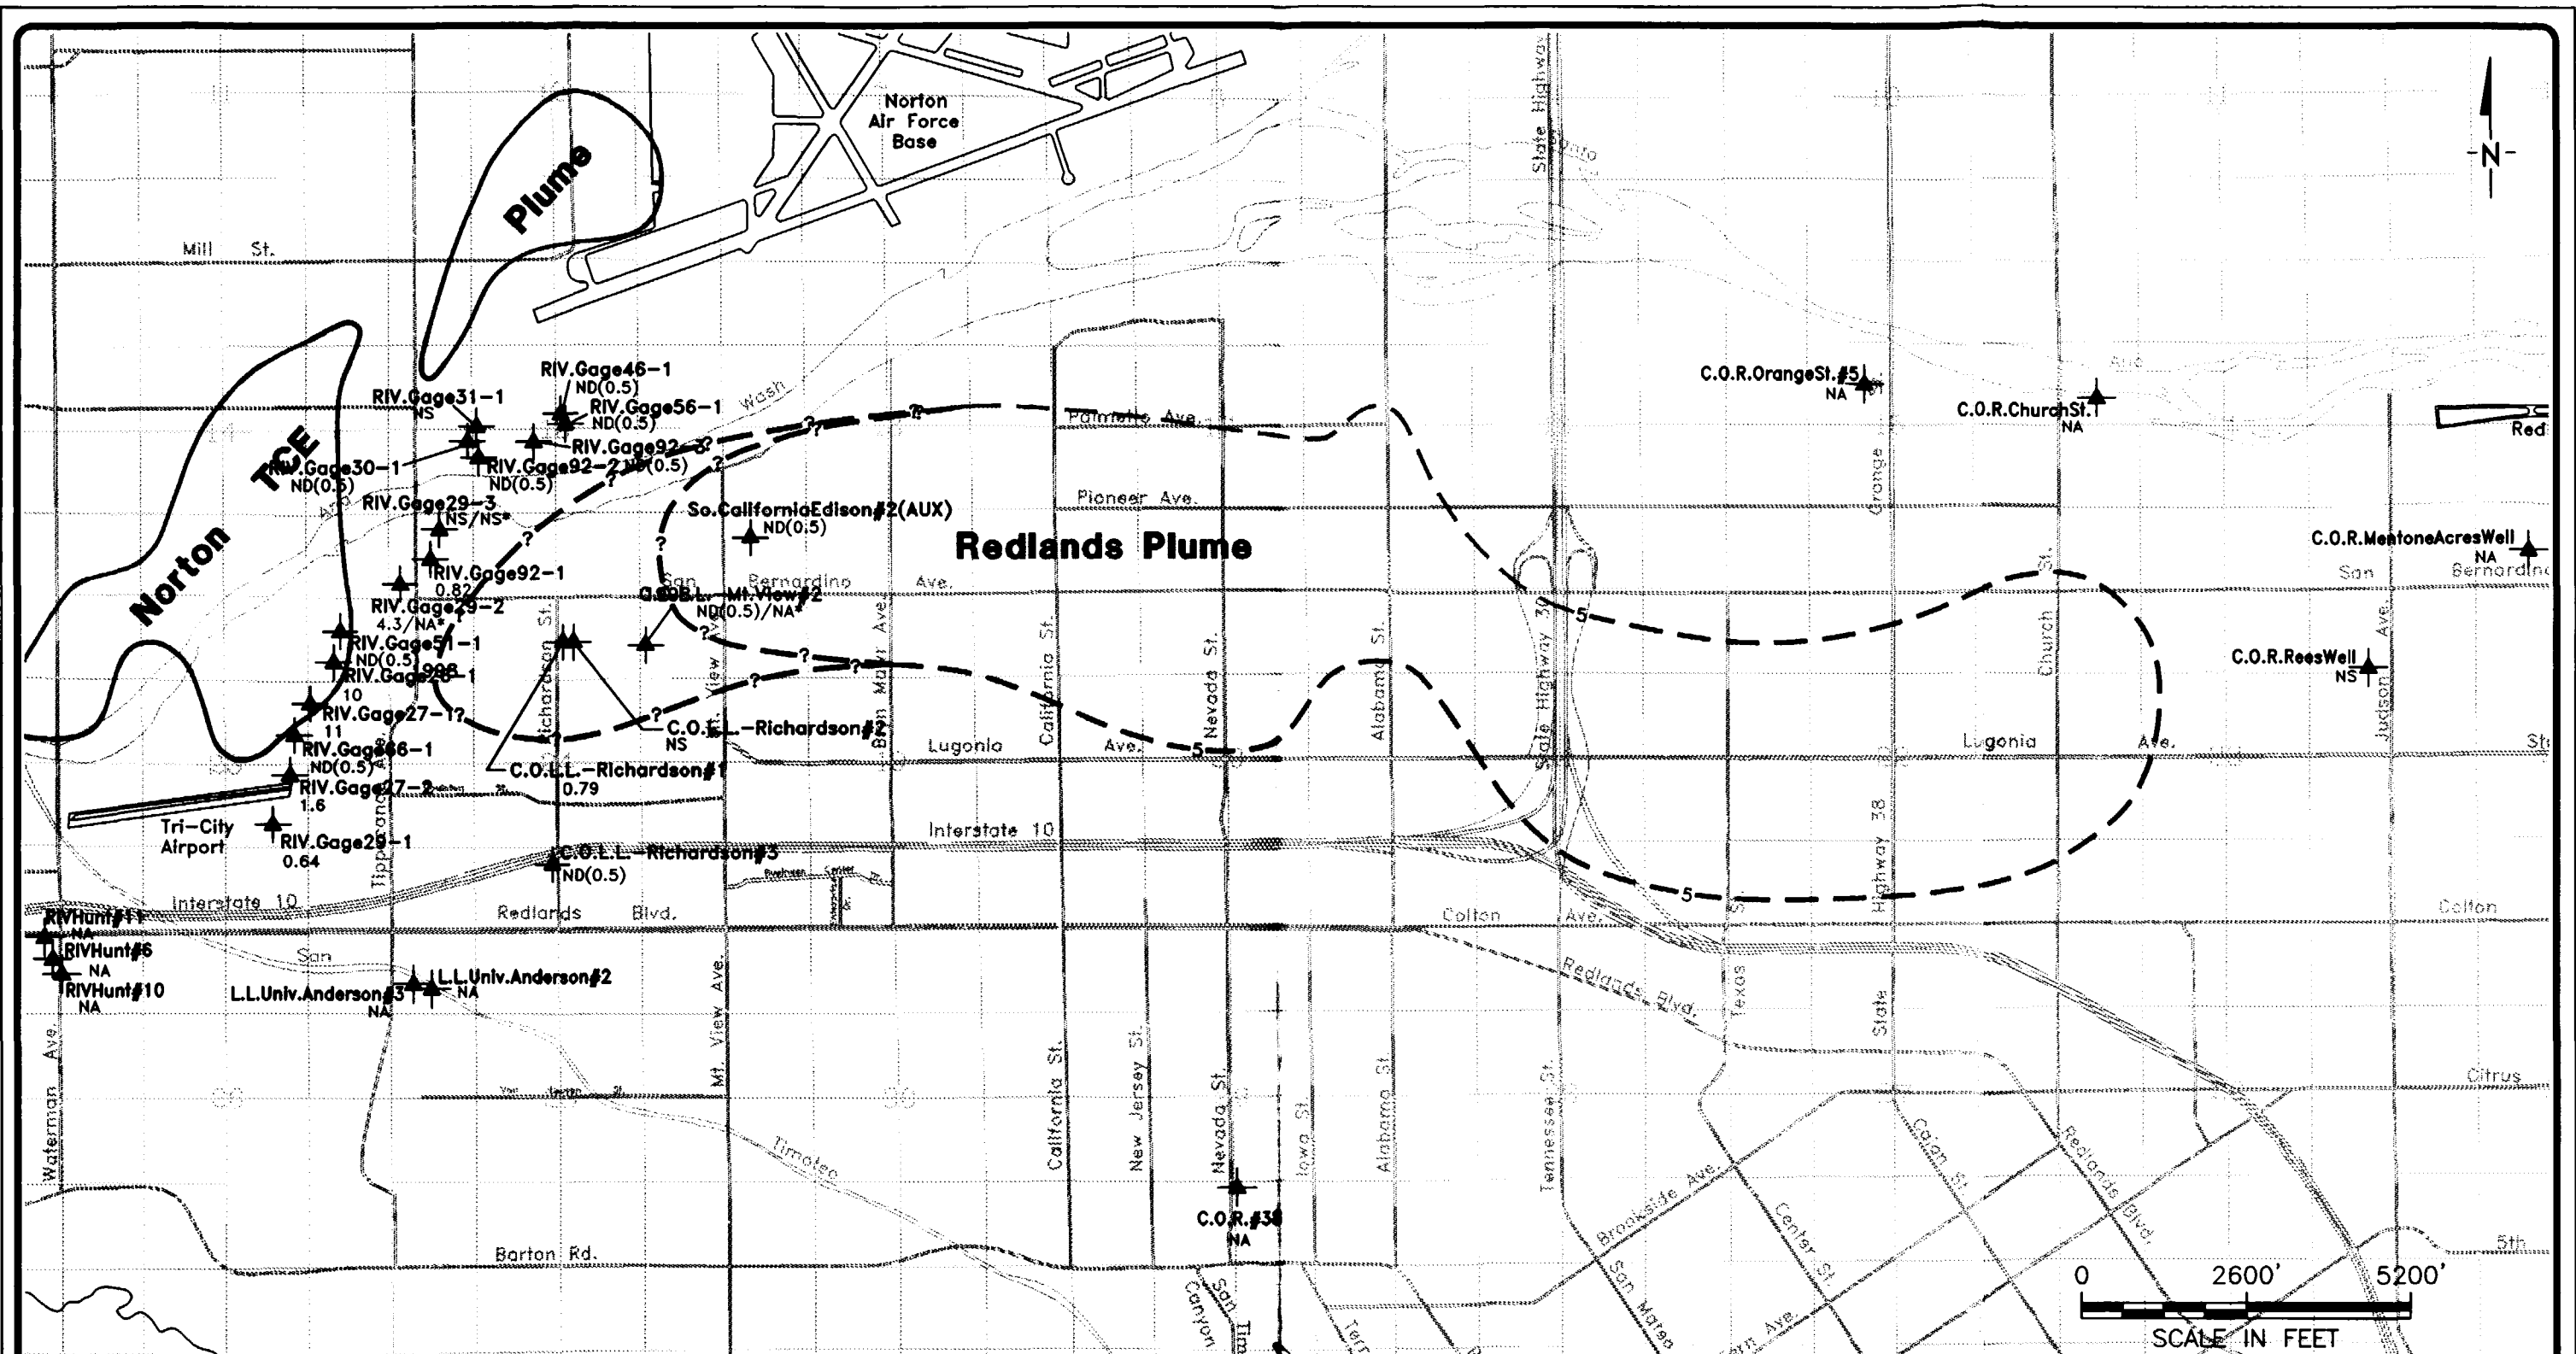

Elevations given in feet above mean sea level (ft-msl)

NM=Not measured

NA=Data not available

Static water levels were allowed to recover a minimum of 30 minutes to obtain a static water level measurement
